

## TRBOPLUS LABS

Using **TRBOPLUS LABS features** , Mototrbo radios can be used like a “**mobile test set**” in order to check and measure DMR RF level on the network.

### **TRBOPLUS LABS add these new functionality to Mototrbo radios :**

- RSSI : received signal measurement in dBm (2 dB error) (analog or digital)
- VFO : allows to set the channel parameters using the radio keypad in both analog or digital channel.
- GPS info on radio display
- Digital audio Monitor : audio listening of all the conversation on the current digital channel (both private or group call)
- 5 tone signaling
- FFSK ETS 300-230 signaling
